

WCHS Patient Portal provides a view into your Electronic Medical Record (EMR) and gives you a secure way to communicate with your care team. However, the information available for you to view through WCHS Patient Portal is not a comprehensive view of all the data in your EMR.

*Note: Lab Results, Radiology Results, and other health information is available to view and communication with your Primary Healthcare Provider is very important in understanding the information.

Weston County Health Services Patient Portal

Connect to Your Health 24/7

Welcome to Your Patient Portal!

WCHS Patient Portal facilitates better communication with our patients by providing convenient and secure access from the comfort and privacy of your home or office.

Take advantage of the online services offered. You can receive access to your children's health information or, with their consent, older family members so you can get a better picture of their health.

You will have the capability to see test results, send a message to your doctor or nurse and even schedule appointments with your physician at your fingertips.

*Meet your new
personal health
assistant...*

On your computer or smart phone.

Use our patient portal to:

- Request appointments anytime, even when we're closed.
- Receive reminders of important care items.
- Message a doctor for health advice.
- View lab results on line rather than waiting for them in the mail.
- Download health records to easily share with other doctors.
- Save time and postage by paying health bills online.
- Access your health records in one place, such as procedures, scans, x-ray reports, allergies, medications and immunizations.

To get started, all we need is your email address. A temporary passcode will be emailed to you to set up your account. All information is private and secure and it doesn't cost a penny to enroll.

Registration will be available at our ER/Outpatient Desk and our Physical Therapy Department.

*Put Your Health
In Your Hands.
